

# Covid-19 Safety at Work Program

## Enterprise program to manage the Covid-19 epidemic

**Medical Link Services (MLS)**, is a defining eHealth Swiss based solution provider, active in public health since 2005 through a secure and certified **Web** healthcare platform.

This platform, is daily used throughout Switzerland by +10'000 healthcare professionals and managing several hundred thousands patients' files. It coordinates patient compliance programs and care services to individuals.

During the deconfinement phase, it will be essential to strongly protect the areas where people congregate and namely in working environments. The Covid-19 Safety at Work program makes a significant contribution by providing a "Work Entitlement Certificate" to employees returning at work and thus **reducing re-confinement risks**.

Only this entitlement, based on a daily self-assessment of the employee, makes it possible to reduce contagion risks across staff in the work environment.

**The Covid-19 Safety at Work program, made available within 72 hours on a proofed based platform**, aims at ensuring business continuity during and after deconfinement, providing maximum protection to employees for a safe working environment and demonstrating corporate responsibility towards all staff.

### Employee benefits

A Federal Office of Public Heal (FOPH) -compliant health self-assessment form to be completed daily, an individual clinical file presenting the evolution of the condition (only accessible by the employee), automated SMS reminders after 48 hours with no self-assessment, a Work Entitlement Certificate available on the smartphone upon request.

### Enterprise benefits

A procedure complying with federal regulations ensuring safety at work and demonstrating corporate responsibility while preserving employee data privacy.

# Safety at Work Covid-19 Program

**The company notifies employees** that enrollment in the program is a prerequisite to returning at work

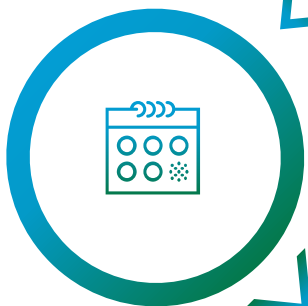

**The employee reports daily his health condition,** using to Federal Office of Public Health (FOPH) self-assessment grid

**If the employee does not** self-assess for more than 48 hours, he receives a SMS reminder

**History of clinical data is available** only to the employee

**The employee must** follow the protocol. If assessments show no risk values repeatedly, the system produces automatically a **Work Entitlement Certificate**

**This Certificate is available on smartphone** and can be shown to the employer upon request. It does not contain medical data.
