

Citizen program to manage the Covid-19 epidemic

Medical Link Services (MLS), one of the main publishers of ehealth software in Switzerland, is active in public health since 2005 through a secure and certified **Web** platform.

This platform, used throughout Switzerland, coordinates patient compliance programs, home care professionals and transport professionals for disabled people.

The Citizen Covid-19 program aims to delay or even avoid the implementation of total containment measures for the population by detecting new outbreaks as quickly as possible and by increasing public adoption and respect of Governments instructions. It also allows to secure the end of the isolation phase and to prepare the healthcare system for potential next episodes of the epidemic. **It is anonymous and thus respects everyone's privacy.**

Through its platform, the program provides:

For the Citizen

An anonymous demographic data form, a health state evaluation form, an individual clinical file presenting the evolution of his health state, automatic reminders by SMS if he doesn't evaluate himself for more than 48 hours.

For healthcare professionals

Cross-functional access to coordinate actions, access to citizens' anonymous individual clinical files, real-time mapping of the distribution of situations.

Delay / avoid a complete containment of the population

Detect new outbreaks as quickly as possible

Increase citizens' support for government action

Secure the end of the isolation phase

Citizen Program Covid-19

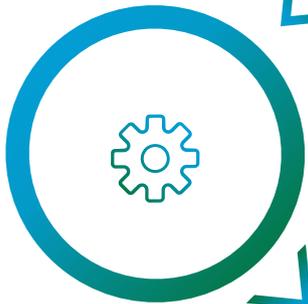

Anonymous demographic data to be filled in by the citizen

COVID-19 assessment to enter daily in a very simple web form

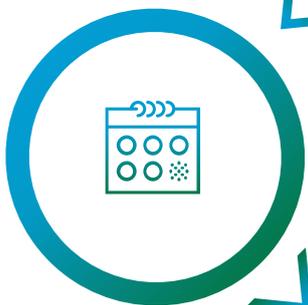

10 criteria of Healthcare Authorities

Compliance assistance mechanism; if the citizen does not assess himself for more than 48 hours, he receives a SMS reminder

Evolution of the clinical situation: citizens can review the history of clinical values they have entered

Public Health Vision, the coordination cells have access to a real-time mapping of the distribution of situations. **Citizen anonymity is guaranteed.**

Steering the program, the coordination cells have access to a list presenting the information returned in text and graphic mode.
